Paints and varnishes — Determination of resistance to cyclic corrosion conditions

Part 2: Wet (salt fog)/dry/humidity/UV light
(ISO 11997-2:2013)

National foreword

This British Standard is the UK implementation of EN ISO 11997-2:2013. It supersedes BS EN ISO 11997-2:2006 which is withdrawn.

BSI, a member of CEN, is obliged to publish BS EN ISO 11997-2 as a British Standard. However, attention is drawn to the fact that the UK committee voted against its approval as a standard in CEN and ISO. The UK committee have agreed that clause 8.4 should have been specified further with respect to the test cycle (durations of light and dark periods). The committee are of the opinion that the informative Annex A should have been omitted to avoid any misunderstanding regarding alternative test procedures. Further, the UK committee feel that the method referenced in A.3.3.1 is not a cyclic corrosion test and is therefore outside of the scope of the ISO 11997 series. For these reasons, a negative vote was submitted.

The UK participation in its preparation was entrusted to Technical Committee STI/10, Test methods for paints.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
