Building information modelling and other digital processes used in construction – Methodology to describe, author and maintain properties in interconnected data dictionaries

National foreword

This British Standard is the UK implementation of EN ISO 23386:2020. It is identical to [ISO 23386:2020](#).

The UK participation in its preparation was entrusted to Technical Committee B/555, Construction design, modelling and data exchange.

The provisions of this standard describe the methodology to describe, author and maintain properties in interconnected dictionaries.

Attention is drawn to the BSI publication PAS 14191:2020 for the UK localization and additional requirements in relation to a network, or networks, of interconnected data dictionaries as would be applied in the UK.

This standard and PAS 14191:2020 are designed to be used in conjunction to facilitate the exchange of properties, groups of properties, data templates and data sheets in a seamless and streamlined manner to assist the UK construction sector in the efficient and effective communication of information related to constructed assets and the products that comprise them.

PAS 14191:2020 localizes this standard and specifies additional process requirements to facilitate the effective management of dictionaries and networks of dictionaries hosting properties, groups of properties, data templates and data sheets for use within the UK construction sector, making use of the attributes as specified.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
