

Acoustics — Determination of occupational noise exposure — Engineering method (ISO 9612:2009)

ICS 13.140; 17.140.20; 17.140.50

National foreword

This British Standard is the UK implementation of EN ISO 9612:2009.

The UK participation in its preparation was entrusted to Technical Committee EH/1/3, Residential and industrial noise.

A list of organizations represented on this committee can be obtained on request to its secretary.

The UK committee would like users to be aware that it is not a legal requirement when assessing risks from occupational noise exposure, that exposure be determined to engineering grade.

The HSE publication L108 Controlling Noise at Work includes guidance on the assessment of occupational noise exposure. L108 states that employers following the guidance will normally be doing enough to comply with the law.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 31 July 2009
