Systems to manage terminology, knowledge and content — Concept-related aspects for developing and internationalizing classification systems

National foreword

This British Standard is the UK implementation of ISO 22274:2013.

Attention is drawn to the fact that during the development of this international Standard, the UK committee voted against its approval as an international Standard.

The standard makes a valuable contribution to the development of classification theory in relation to terminology, however, in the opinion of the committee, instead of harmonizing the classification techniques used in terminology, product classification and other classification, too heavy reliance is placed on more commonly used methods of product classification, which are made possible only because of the nature of products. The committee is also of the opinion that the standard does not sufficiently explain variations in terminology from ISO 1087-1:2000 to classification generally, and hence to product classification.

The UK participation in its preparation was entrusted to Technical Committee TS/1, Terminology.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
