

BSI Standards Publication

**Service activities relating to drinking water supply, wastewater and stormwater systems —
Stormwater management — Guidelines for
stormwater management in urban areas**

National foreword

This British Standard is the UK implementation of ISO 24536:2019.

The UK participation in its preparation was entrusted to Technical Committee CB/503/-/2, Urban storm water management.

A list of organizations represented on this committee can be obtained on request to its secretary.

It is the committee's view that the scope of this International Standard partly overlaps with part of the scope of BS EN 752:2017 where they both cover the planning of surface water drainage systems. However, the scopes of both standards are wider than this.

BS ISO 24536:2019 applies the same planning principles that were adopted by BS EN 752:2017 for the planning of drain and sewer systems and has copied and adapted text from BS EN 752:2017.

The committee does not consider there to be any conflict between the standards.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
