## **Dense, shaped refractory products — Determination of cold compressive strength —**

### **Part 1: Referee test without packing**

*Produits réfractaires façonnés denses — Détermination de la résistance  
à la compression à température ambiante —*

*Partie 1: Méthode d'essai de référence sans intercalaire*

Reference number  
ISO 10059-1:1992(E)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10059-1 was prepared by Technical Committee ISO/TC 33, *Refractories*, Sub-Committee SC 2, *Methods of testing*.

ISO 10059 consists of the following parts, under the general title *Dense, shaped refractory products — Determination of cold compressive strength*:

- *Part 1: Referee test without packing*
- *Part 2: Test with packing*
