Stainless steel tubes — Dimensions, tolerances and conventional masses per unit length

*Tubes en acier inoxydable — Dimensions, tolérances et masses linéiques
conventionnelles*

Reference number
ISO 1127:1992(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 1127 was prepared by Technical Committee ISO/TC 5, *Ferrous metal pipes and metallic fittings*, Sub-Committee SC 1, *Steel tubes*.

This third edition cancels and replaces the second edition (ISO 1127:1980), of which tables 1 and 2 (now tables 3 and 4) have been technically revised. In particular, the diameter 12,7 mm has been added to series 2 in these two tables.

Annex A of this International Standard is for information only.
