
**Plastics piping systems — Unplasticized
poly(vinyl chloride) (PVC-U)
end-load-bearing double-socket joints —
Test method for leaktightness and strength
while subjected to bending and internal
pressure**

*Systèmes de canalisations en plastiques — Double manchon en
poly(chlorure de vinyle) non plastifié (PVC-U) résistant à la traction
axiale — Méthode d'essai d'étanchéité et de la résistance en traction, avec
solicitation en flexion et pression interne*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 13783 was prepared by the European Committee for Standardization (CEN) in collaboration with ISO Technical Committee TC 138, *Plastics pipes, valves and fittings for the transport of fluids*, Subcommittee SC 2, *Plastics pipes and fittings for water supplies*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).
