Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 1998-4 was prepared by Technical Committee ISO/TC 28, *Petroleum products and lubricants*, Subcommittee SC 1, *Terminology*.

This first edition, together with the other seven parts of ISO 1998, cancels and replaces all of the first edition, which was composed of two parts (ISO 1998-1:1974 and ISO 1998-2:1976).

This new edition constitutes a full recast of the standard, with a new classification system for all terms of the two parts of the first edition, which are now distributed in all parts of the new edition, and the addition of many new terms.

ISO 1998 consists of the following parts, under the general title *Petroleum industry — Terminology*:

- *Part 1: Raw materials and products*
- *Part 2: Properties and tests*
- *Part 3: Exploration and production*
- *Part 4: Refining*
- *Part 5: Transport, storage, distribution*
- *Part 6: Measurement*
- *Part 7: Miscellaneous terms*
- *Part 99: General and index*
