Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 2187 was prepared by Technical Committee ISO/TC 72, *Textile machinery and allied machinery and accessories*.

This second edition cancels and replaces the first edition (ISO 2187 : 1976), of which it constitutes a minor revision. The equivalent German and Italian terms, which were given in annexes in the first edition, have been included in the main text.
