Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard 233-3 was prepared by Technical Committee ISO/TC 46, *Information and documentation*, Subcommittee SC 2, *Conversion of written languages*.

ISO 233 consists of the following parts, under the general title *Information and documentation — Transliteration of Arabic characters into Latin characters*:

- *Part 1: Arabic language — Stringent transliteration* (Actually published as ISO 233:1984, *Documentation — Transliteration of Arabic characters into Latin characters*.)
- *Part 2: Arabic language — Simplified transliteration*
- *Part 3: Persian language — Simplified transliteration*

Annexes A to C form an integral part of this part of ISO 233. Annex D is for information only.
