

INTERNATIONAL STANDARD

ISO
4021

Second edition
1992-11-15

Hydraulic fluid power — Particulate contamination analysis — Extraction of fluid samples from lines of an operating system

*Transmissions hydrauliques — Analyse de la pollution par particules —
Prélèvement des échantillons de fluide dans les circuits en
fonctionnement*

Reference number
ISO 4021:1992(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 4021 was prepared by Technical Committee ISO/TC 131, *Fluid power systems*, Sub-Committee SC 8, *Product testing and contamination control*.

This second edition cancels and replaces the first edition (ISO 4021:1977), which has been technically revised.

Annex A of this International Standard is for information only.
