Measurement methods for building — Setting-out and measurement —

Part 1:

Planning and organization, measuring procedures,
acceptance criteria

*Méthodes de mesurage pour la construction — Piquetage et mesurage —
Partie 1: Planification et organisation, procédures de mesurage
et critères d'acceptation*

Reference number
ISO 4463-1 : 1989 (E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 4463-1 was prepared by Technical Committee ISO/TC 59, *Building construction*.

This first edition of ISO 4463-1 cancels and replaces ISO 4463 : 1979, of which it constitutes a technical revision.

Users should note that all International Standards undergo revision from time to time and that any reference made herein to any other International Standard implies its latest edition, unless otherwise stated.
