Laboratory glassware — Methods for assessing the chemical resistance of enamels used for colour coding and colour marking

Verrerie de laboratoire — Méthodes d'évaluation de la résistance chimique des émaux utilisés pour le code de couleurs et les couleurs d'identification

First edition — 1982-05-01

APR 27 1982

UDC 542.3 : 666.29 : 620.193.4

Ref. No. ISO 4794-1982 (E)

Descriptors : glassware, laboratory glassware, pipettes, tests, enamels, chemical resistance, colour codes.

Price based on 2 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4794 was developed by Technical Committee ISO/TC 48, *Laboratory glassware and related apparatus*, and was circulated to the member bodies in June 1979.

It has been approved by the member bodies of the following countries :

Australia	India	Romania
Czechoslovakia	Israel	South Africa, Rep. of
Egypt, Arab Rep. of	Italy	Spain
France	Korea, Rep. of	United Kingdom
Germany, F. R.	Mexico	USA
Hungary	Poland	USSR

No member body expressed disapproval of the document.
