Tool steels and bearing steels — Micrographic method for assessing the distribution of carbides using reference photomicrographs

Aciers à outils et aciers de roulement — Méthode micrographique d'évaluation de la répartition des carbures à l'aide d'images-types

First edition — 1983-12-15

UDC 669.14.018.25 : 620.186

Ref. No. ISO 5949-1983 (E)

Descriptors : steels, tool steels, analysis methods, metallography, determination, carbides, comparison analysis, sampling.

Price based on 9 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 5949 was developed by Technical Committee ISO/TC 17, *Steel*, and was circulated to the member bodies in September 1982.

It has been approved by the member bodies of the following countries :

Australia	Ireland	Portugal
Austria	Italy	South Africa, Rep. of
Belgium	Japan	Spain
Czechoslovakia	Kenya	Sweden
Egypt, Arab Rep. of	Korea, Dem. P. Rep. of	Tanzania
France	Korea, Rep. of	Turkey
Germany, F.R.	Netherlands	United Kingdom
Hungary	New Zealand	USA
India	Norway	
Iran	Poland	

No member body expressed disapproval of the document.
