
Coated abrasives — Grain size analysis —

Part 2:

Determination of grain size distribution of
macrogrits P12 to P220

Abrasifs appliqués — Granulométrie —

*Partie 2: Détermination de la distribution granulométrique des macrograins
P12 à P220*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 6344-2 was prepared by Technical Committee ISO/TC 29, *Small tools*, subcommittee SC 5, *Grinding wheels and abrasives*.

ISO 6344 consists of the following parts, under the general title *Coated abrasifs - Grain size analysis*:

- *Part 1: Grain size distribution test*
- *Part 2: Determination of grain size distribution of macrogrits P12 to P220*
- *Part 3: Determination of grain size distribution of microgrits P240 to P2500*

Annexes A and B of this part of ISO 6344 are for information only.
