Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 6722-4 was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Sub-Committee SC 3, *Electrical and electronic equipment*.

ISO 6722 consists of the following parts, under the general title *Road vehicles — Unscreened low-tension cables*:

- *Part 1: General requirements and test methods*
- *Part 2: Cable classes, applicable tests and special requirements*
- *Part 3: Conductor sizes and dimensions for thick-wall insulated cables*
- *Part 4: Conductor sizes and dimensions for thin-wall insulated cables*

Annex A of this part of ISO 6722 is for information only.
