Steel for the reinforcement of concrete —

Part 3: Welded fabric

*Acier à béton pour armatures passives —
Partie 3: Treillis soudés*

Reference number
ISO 6935-3:1992(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 6935-3 was prepared by Technical Committee ISO/TC 17, *Steel*, Sub-Committee SC 16, *Steels for the reinforcement and prestressing of concrete*.

ISO 6935 consists of the following parts, under the general title *Steel for the reinforcement of concrete*:

- Part 1: *Plain bars*
- Part 2: *Ribbed bars*
- Part 3: *Welded fabric*

Annex A of this part of ISO 6935 is for information only.
