
**Plastics piping systems — Glass-reinforced
thermosetting plastics (GRP) pipes —
Determination of initial specific ring
stiffness**

*Systèmes de canalisation en matières plastiques — Tubes en plastiques
thermodurcissables renforcés de verre (PRV) — Détermination de la rigidité
annulaire spécifique initiale*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 7685 was prepared by Technical Committee ISO/TC 138, *Plastics pipes, fittings and valves for the transport of fluids*, Subcommittee SC 6, *Reinforced plastics pipes and fittings for all applications*, in collaboration with CEN/TC 155, *Plastics piping systems and ducting systems*.

This International Standard is one of a series of standards on test methods for plastics piping systems and ducting systems.
