Height setting micrometers and riser blocks

Micromètres verticaux et rehausses

First edition — 1984-06-01

UDC 531.714.7

Ref. No. ISO 7863-1984 (E)

Descriptors : measuring instruments, mechanical measuring instruments, micrometers, specifications, marking.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 7863 was developed by Technical Committee ISO/TC 3, *Limits and fits*, and was circulated to the member bodies in March 1983.

It has been approved by the member bodies of the following countries:

Australia	Italy	Switzerland
Belgium	Netherlands	Thailand
Canada	New Zealand	United Kingdom
Czechoslovakia	Poland	USA
Germany, F.R.	South Africa, Rep. of	USSR
Hungary	Spain	
India	Sweden	

The member bodies of the following countries expressed disapproval of the document on technical grounds:

France
Japan
