Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 8421-3 was prepared by Technical Committee ISO/TC 21, *Equipment for fire protection and fire fighting*.

ISO 8421 consists of the following parts, under the general title *Fire protection — Vocabulary*:

- *Part 1: General terms and phenomena of fire*
- *Part 2: Structural fire protection*
- *Part 3: Fire detection and alarm*
- *Part 4: Fire extinction equipment*
- *Part 5: Smoke control*
- *Part 6: Evacuation and means of escape*
- *Part 7: Explosion detection and suppression means*
- *Part 8: Terms specific to fire-fighting, rescue services and handling hazardous materials*
