

INTERNATIONAL STANDARD

ISO
8446

Second edition
1995-03-01

Pipework — Double overlap flexible metal hoses (with packing, leakproof, circular section, in austenitic stainless steel)

*Tuyauteries — Tuyaux métalliques flexibles à agrafage double (avec joint,
étanches, de section circulaire, en acier inoxydable austénitique)*

Reference number
ISO 8446:1995(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 8446 was prepared by Technical Committee ISO/TC 5, *Ferrous metal pipes and metallic fittings*, Subcommittee SC 11, *Flexible interlocked and convoluted metallic hoses*.

This second edition cancels and replaces the first edition (ISO 8446:1985), of which clause 1 has been technically revised.
