

INTERNATIONAL STANDARD

ISO
9504

Second edition
1993-04-01

Metallurgical-grade fluorspar — Determination of antimony content — Solvent extraction atomic absorption spectrometric method

*Spaths fluor utilisables dans l'industrie métallurgique — Dosage de
l'antimoine — Méthode par spectrométrie d'absorption atomique après
extraction*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 9504 was prepared by Technical Committee ISO/TC 175, *Fluorspar*.

This second edition cancels and replaces the first edition (ISO 9504:1990), which has been updated.

Annex A of this International Standard is for information only.
