*Traitement de l'information — Structure de volume et de fichier des disques optiques  
compacts à mémoire fixe (CD-ROM) destinés à l'échange d'information*

Reference number  
ISO 9660 : 1988 (E)

## **Foreword**

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 9660 was prepared by the European Computer Manufacturers Association (as Standard ECMA-119) and was adopted, under a special "fast-track procedure", by Technical Committee ISO/TC 97, *Information processing systems* in parallel with its approval by the ISO member bodies.

Users should note that all International Standards undergo revision from time to time and that any reference made herein to any other International Standard implies its latest edition, unless otherwise stated.
